All fonts are not rendered correctly in Heroku #5
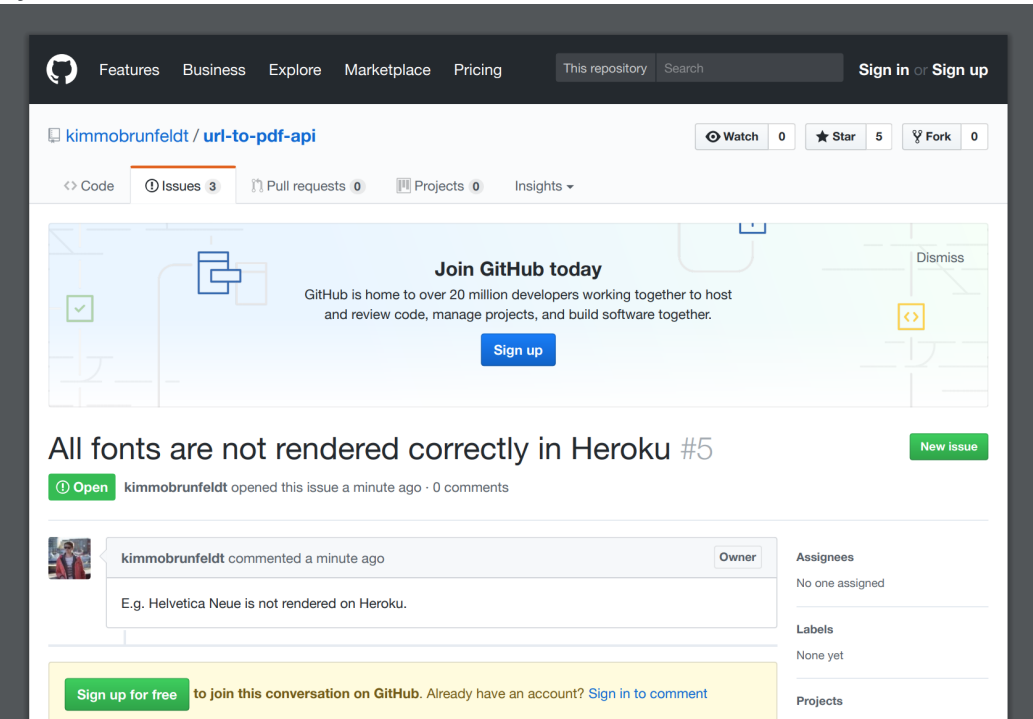

New issue

⊘ Open   kimmobrunfeldt opened this issue 5 days ago · 1 comment

kimmobrunfeldt commented 5 days ago • edited   Collaborator

E.g. Helvetica Neue is not rendered on Heroku. Url: https://url-to-pdf-api.herokuapp.com/api/render?url=https://github.com/kimmobrunfeldt/url-to-pdf-api/issues/5

My macbook:

There will be always some difference between "your" pc and the rendering machine, depends on what you use Windows, Linux, OSX etc. The system font base will be always different, you can include some fonts with some custom font buildbacks, but be aware that the Heroku slug size is limited to ~300MB.

Some random example https://github.com/debitoor/heroku-buildpack-converter-fonts.
